

The workshop on hepatitis c during the Correlation conference, under participation of delegates of the WHO, CEEHRN, Inpud and tELPA, agreed on the following recommendations:

- Correlation Network along with other international partner organizations should make a recommendation to Global Fund to Fight AIDS, Tuberculosis and Malaria to include hepatitis C as a focus component;
- The development of EU-wide advocacy on reducing pricing of drugs, increasing access to prevention (harm reduction) services, treatment and care, to address the issues in countries, not covered by GFATM;
- More work on local level needed on behalf of service providers, to stimulate and introduce additional services related to reduction of HCV risks and harms among injecting and non-injecting drug users.
